Cautionary Statements

PEA Cautionary Note

Readers are cautioned that the PEA is preliminary in nature, it includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the PEA results will be realized. Mineral resources that are not mineral reserves do not have demonstrated economic viability. Additional work is needed to upgrade these mineral resources to mineral reserves.

Forward-Looking Statements

This news release contains “forward-looking” statements and information relating to the Company and the Macmillan Pass Project that are based on the beliefs of Company management, as well as assumptions made by and information currently available to Company management. Such statements reflect the current risks, uncertainties and assumptions related to certain factors including but not limited to, without limitations, exploration and development risks, expenditure and financing requirements, general economic conditions, changes in financial markets, the ability to properly and efficiently staff the Company’s operations, the sufficiency of working capital and funding for continued operations, title matters, First Nations relations, operating hazards, political and economic factors, competitive factors, metal prices, relationships with vendors and strategic partners, governmental regulations and oversight, permitting, seasonality and weather, technological change, industry practices, and one-time events. Additional risks are set out in the Company’s prospectus dated May 9, 2017 and filed under the Company’s profile on SEDAR at www.sedar.com. Should any one or more risks or uncertainties materialize or change, or should any underlying assumptions prove incorrect, actual results and forward-looking statements may vary materially from those described herein. The Company does not undertake to update forward-looking statements or forward-looking information, except as required by law.

Historical Resource Estimates

The reader is cautioned that a qualified person has not done sufficient work to classify the historical estimates in this presentation as current mineral resources or mineral reserves. The Company has not verified these historical resources and is not treating the historical estimates as current mineral resources or mineral reserves. While these estimates were prepared in accordance with National Instrument 43-101 and the “Canadian Institute of Mining, Metallurgy and Petroleum Standards on Mineral Resources and Page 6 of 7 Mineral Reserves Definition Guidelines” in effect at the time, there is no assurance that they are in accordance with current standards and these resource estimates should not be regarded as consistent with current standards or unduly relied upon as such. Fireweed includes these historical estimates in this presentation for information purposes as they represent relevant material historical data which have previously been publicly disclosed and are accessible online. To the Company’s knowledge, the 2007 technical report is the most recent mineral resource estimate available for the Mactung deposits and the 2009 preliminary economic study is the most recent economic study. Further and updated work is needed to validate the drill hole database, associated assay results, economics and other pertinent information. For further information on historical estimates at Mactung consult Fireweed News Release dated June 7, 2022.

NI43-101 Qualified Person

Brandon Macdonald P.Geol., CEO and Director of Fireweed Metals and a Qualified Person under the meaning of Canadian National Instrument 43-101, is responsible for the technical information in this presentation. Leon McGarry, P.Geol., Senior Resource Geologist for CSA Global Canada Geosciences Ltd. is independent of Fireweed Metals. and a ‘Qualified Person’ as defined under Canadian National Instrument 43-101. Mr. McGarry is responsible for the Mineral Resource Estimate and directly related information in this presentation. Michael Makarenko, P.Eng., Project Manager for JDS Energy and Mining, Inc., is independent of Fireweed Metals. and a ‘Qualified Person’ as defined under Canadian National Instrument 43-101. Mr. Makarenko is responsible for the PEA results and directly related information in this presentation.

DISCOVERY GROUP

An alliance of public companies, individually managed and focused on the advancement of global mineral exploration and mining projects, with a proven track record of generating shareholder value.

Over C\$2.6 billion
in M&A since 2002

Over C\$1 billion in
equity raised since 2002

Companies succeed with access to:

- Integral industry relationships
- Increased company profile
- High-quality deal flow
- Significant capital
- Proven technical & management talent

About Fireweed Metals

Fireweed is a Canadian company with the mission to explore and develop critical mineral assets through progressive leadership, high standards, innovation, and collaborative partnerships for the benefit of present and future generations.

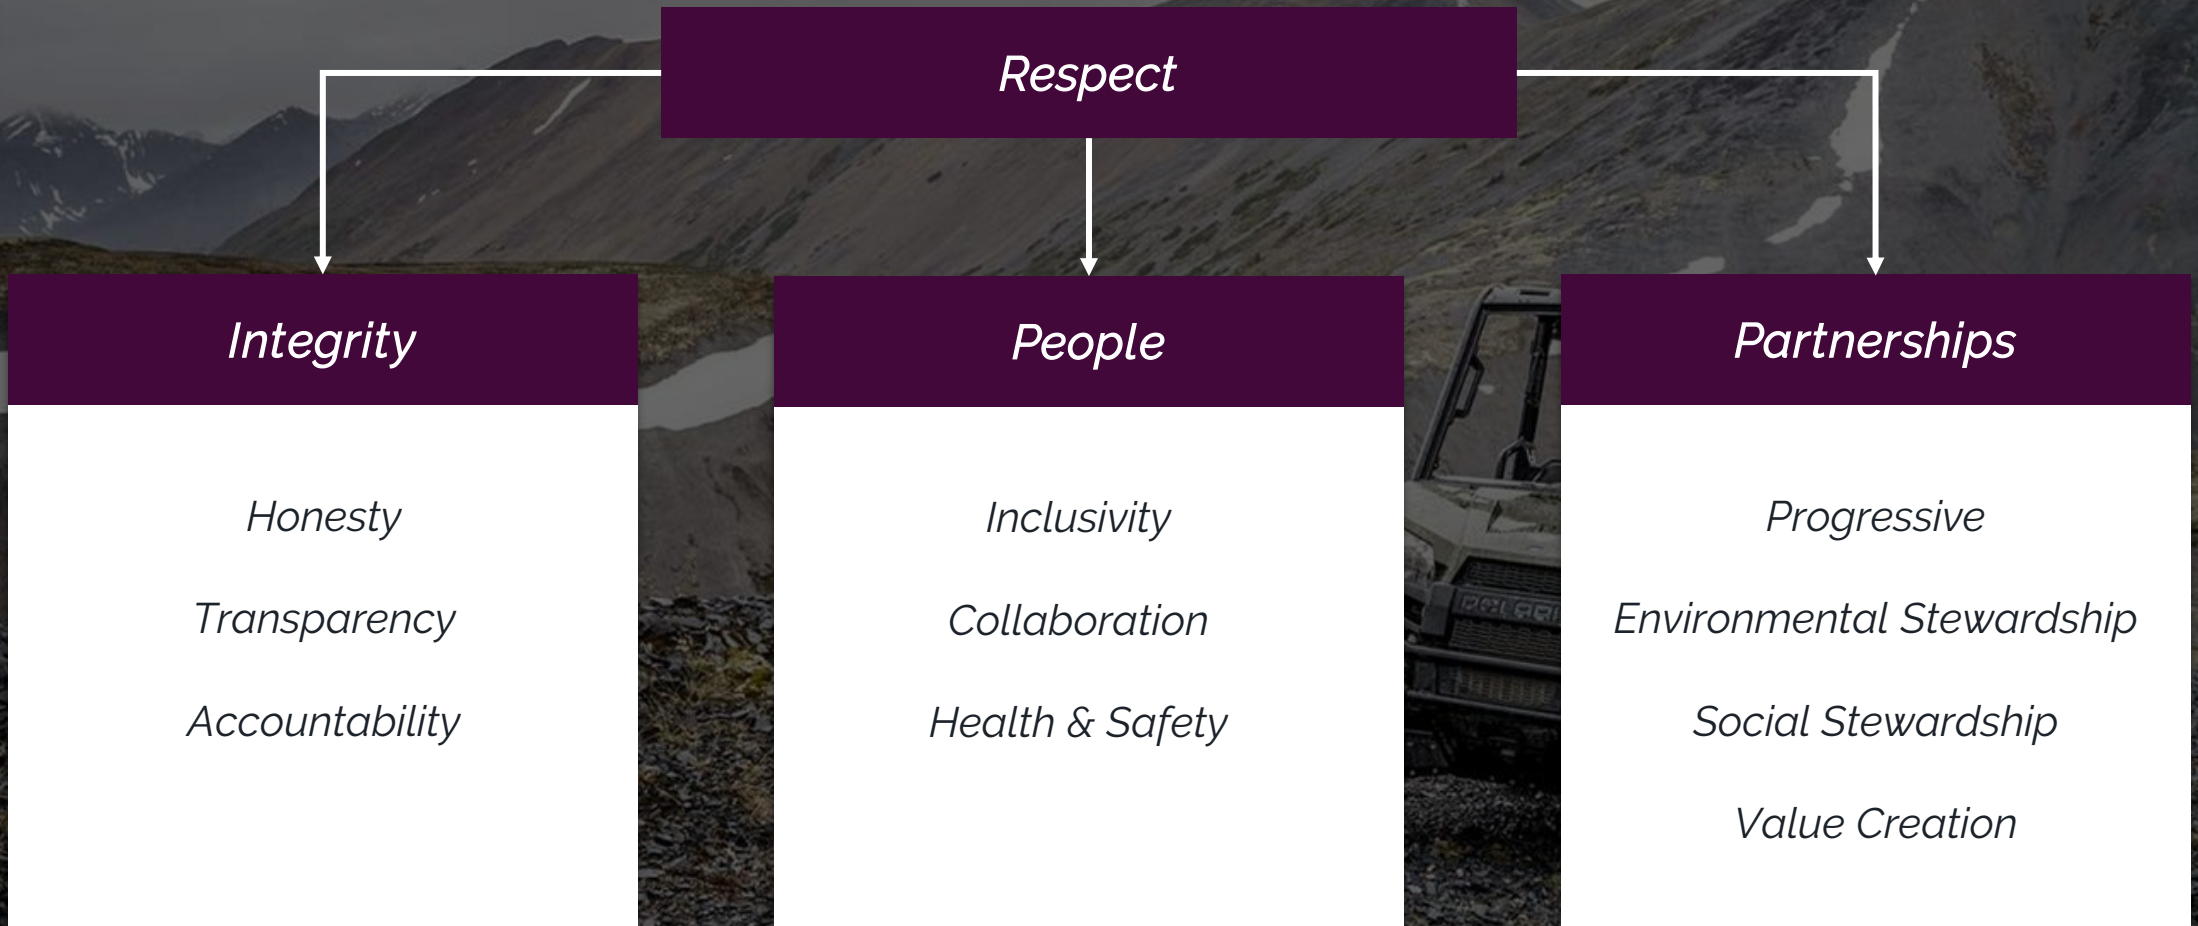

Our Vision

Fireweed Metals will sustainably explore and develop critical minerals assets to support the transition to a low-carbon economy. We will focus on leading with integrity, striving for consistency in words and actions, being honest, transparent, and accountable, mitigating health and safety risks, and being progressive and innovative while promoting environmental and social stewardship.

We will act in a way that reflects our core value of respect, for both the environment in which we work and the people we work with. Our approach will foster meaningful relationships with employees and local communities, and will build trusted partnerships benefiting Indigenous peoples and shareholders.

Our Values

Why Critical Metals? Why Fireweed?

We're leveraging our local and regional knowledge to create a new world-class critical metals district in Yukon, Canada

Critical metals essential

Geopolitical conflict and resource nationalism are fueling critical metals focus

Robust projects

Our projects have grade, scale, economics and upside potential

Upcoming bull market

Current crisis has highlighted fragility in critical metals market

Big names invested

Teck and Lundin have invested, others are watching

Massive global stimulus

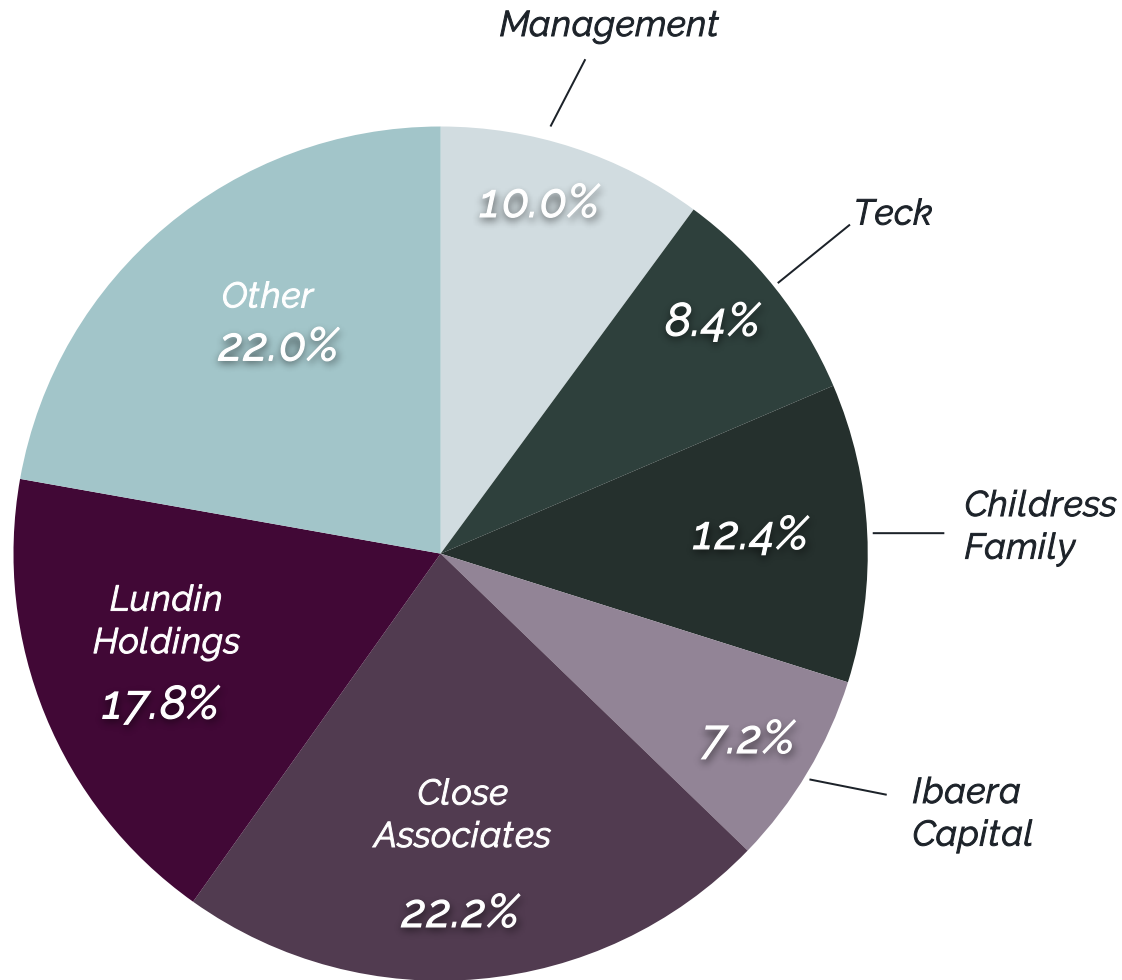

Fiscal stimulus will focus on infrastructure bullish for zinc

Upcoming studies

New studies are pending

Capital Structure

As of July 01, 2023

Shares Outstanding **135,384,921**

Shares Issuable Under Stock Option Plan **11,613,000**

Performance Shares **3,700,000**

Agents Warrants **558,104**

Investor Warrants **3,554,670**

Fully Diluted **154,810,695**

Board of Directors

Brandon Macdonald

CEO & Director

- *Chairman, Commander Resources Ltd.*
- *Ex. Macquarie Bank*
- *BSc. Geology, UBC and MBA, Oxford University*
- *Long history of work in Yukon*

John Robins

Executive Chairman

- *Founder, Executive Chairman, and Director, Kaminak Gold (\$520M T/O)*
- *Founder & Chairman Great Bear Resources/Royalties (\$200MT/O)*
- *Principal of Discovery Group*
- *Winner of AMECBC's Murray Pezim Award in 2018 and 2022, and H.H. Huestis Award in 2008*

Adrian Rothwell

CEO, Angold Resources

Marcus Chalk

Principal, Gencap Mining

Peter Hemstead

CFO, Bluestone Resources

Jill Donaldson

Principal, IWJ Law

Project Locations & Existing Infrastructure

Macmillan Pass & Mactung Projects

Over 978-sq-km land package
The project is accessible via existing 3km road

Gayna River

New zinc exploration project with intriguing potential and significant mineralization

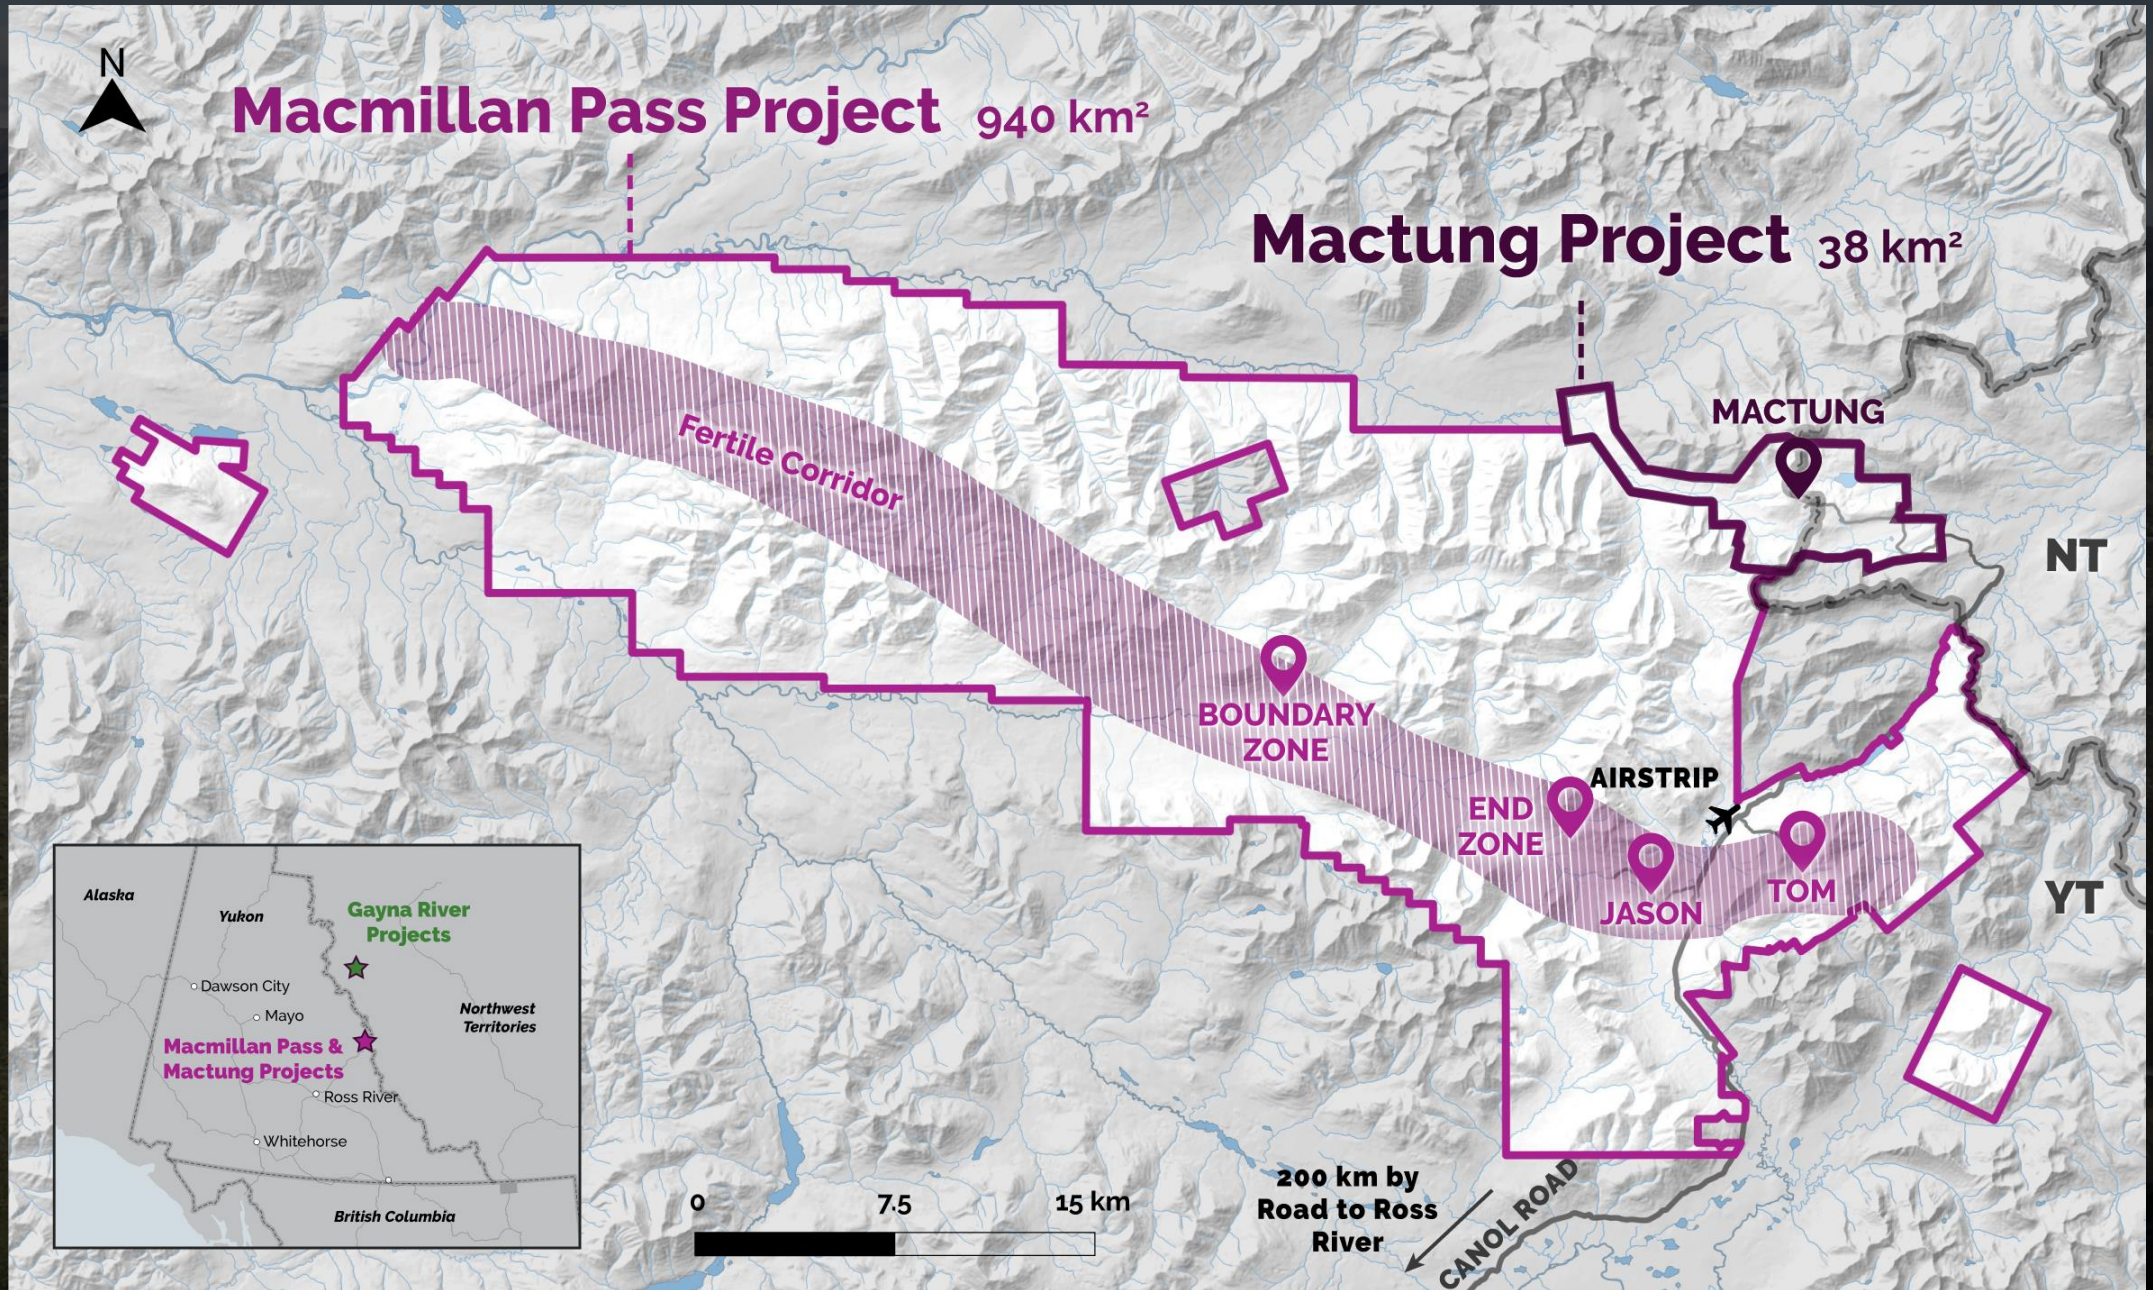

An aerial photograph of a mountainous landscape. In the foreground, a wide, winding river flows through a valley. The middle ground shows rolling hills and a dense forest. In the background, a range of rugged mountains stretches across the horizon under a cloudy sky. The overall tone is dark and atmospheric.

Macmillan Pass Project

Overview

We respectfully acknowledge that the Macmillan Pass Project is located on the Traditional Territories of the Kaska Dena Nation and the First Nation of Na-Cho Nyak Dun.

2018 Resource Update & PEA

Resource Estimate

	Mt	Zn	Pb	Ag	ZnEq
<i>Indicated</i>	11.2	6.59%	2.48%	21.33 g/t	9.61%
<i>Inferred</i>	39.5	5.84%	3.14%	38.15 g/t	10%

	Zinc	Lead	Silver
<i>Indicated</i>	0.74 Mt (1.6 Blbs)	0.28 Mt (0.62 Blbs)	7.7 Moz
<i>Inferred</i>	2.23 Mt (4.91 Blbs)	1.22 Mt (2.67 Blbs)	48.4 Moz

Preliminary Economic Assessment

24% After-tax IRR	C\$448M After-tax NPV8	C\$404M Initial CAPEX
18 yrs Mine life	32.7 Mt Life of Mine Tonnage	*Using US\$1.21/lb Zn, \$0.98/lb Pb, \$16.80/oz Ag

January 2018 Mineral Resource Estimate identifies Macmillan Pass Project among the world's most significant zinc resources. The 2018 PEA and resource do not include:

- Additional drilling at Tom & Jason Zones will both expand resource and improve grades in some zones
- Boundary Zone has no resource yet, and massive size potential
- Additional engineering to improve pits, metallurgy, and optimize mine plan
- \$71M in government funding commitment to access roads, included as project CAPEX in 2018 PEA, now offset

Updated resource statement and new studies will reflect these improvements, and add to an already world-class resource and robust mine plan

West

Main

**Hess
Fault**

**Boundary
Zone**

Why is Boundary Zone Significant?

Great Results

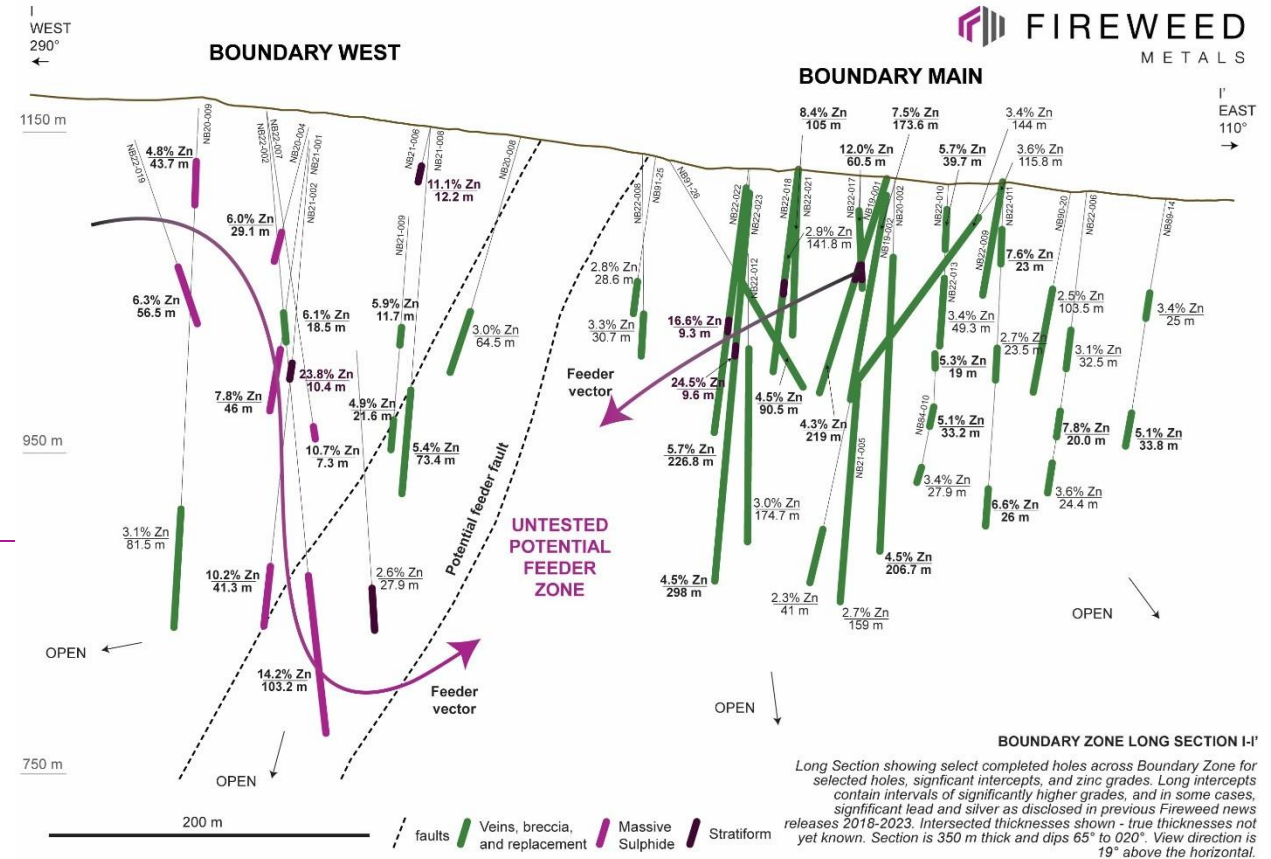

- NB19-002: 230 m of 4.51% Zn from surface, including 100 m of 8.73% Zn, with 6.4m of 43.5% Zn
- NB20-002: 213 m of 4.42% Zn, including 25.58% Zn over 5.81 m
- NB21-002: 32.99 m of 9.91% Zn and 10.42 m of 23.77% Zn

NB22-002

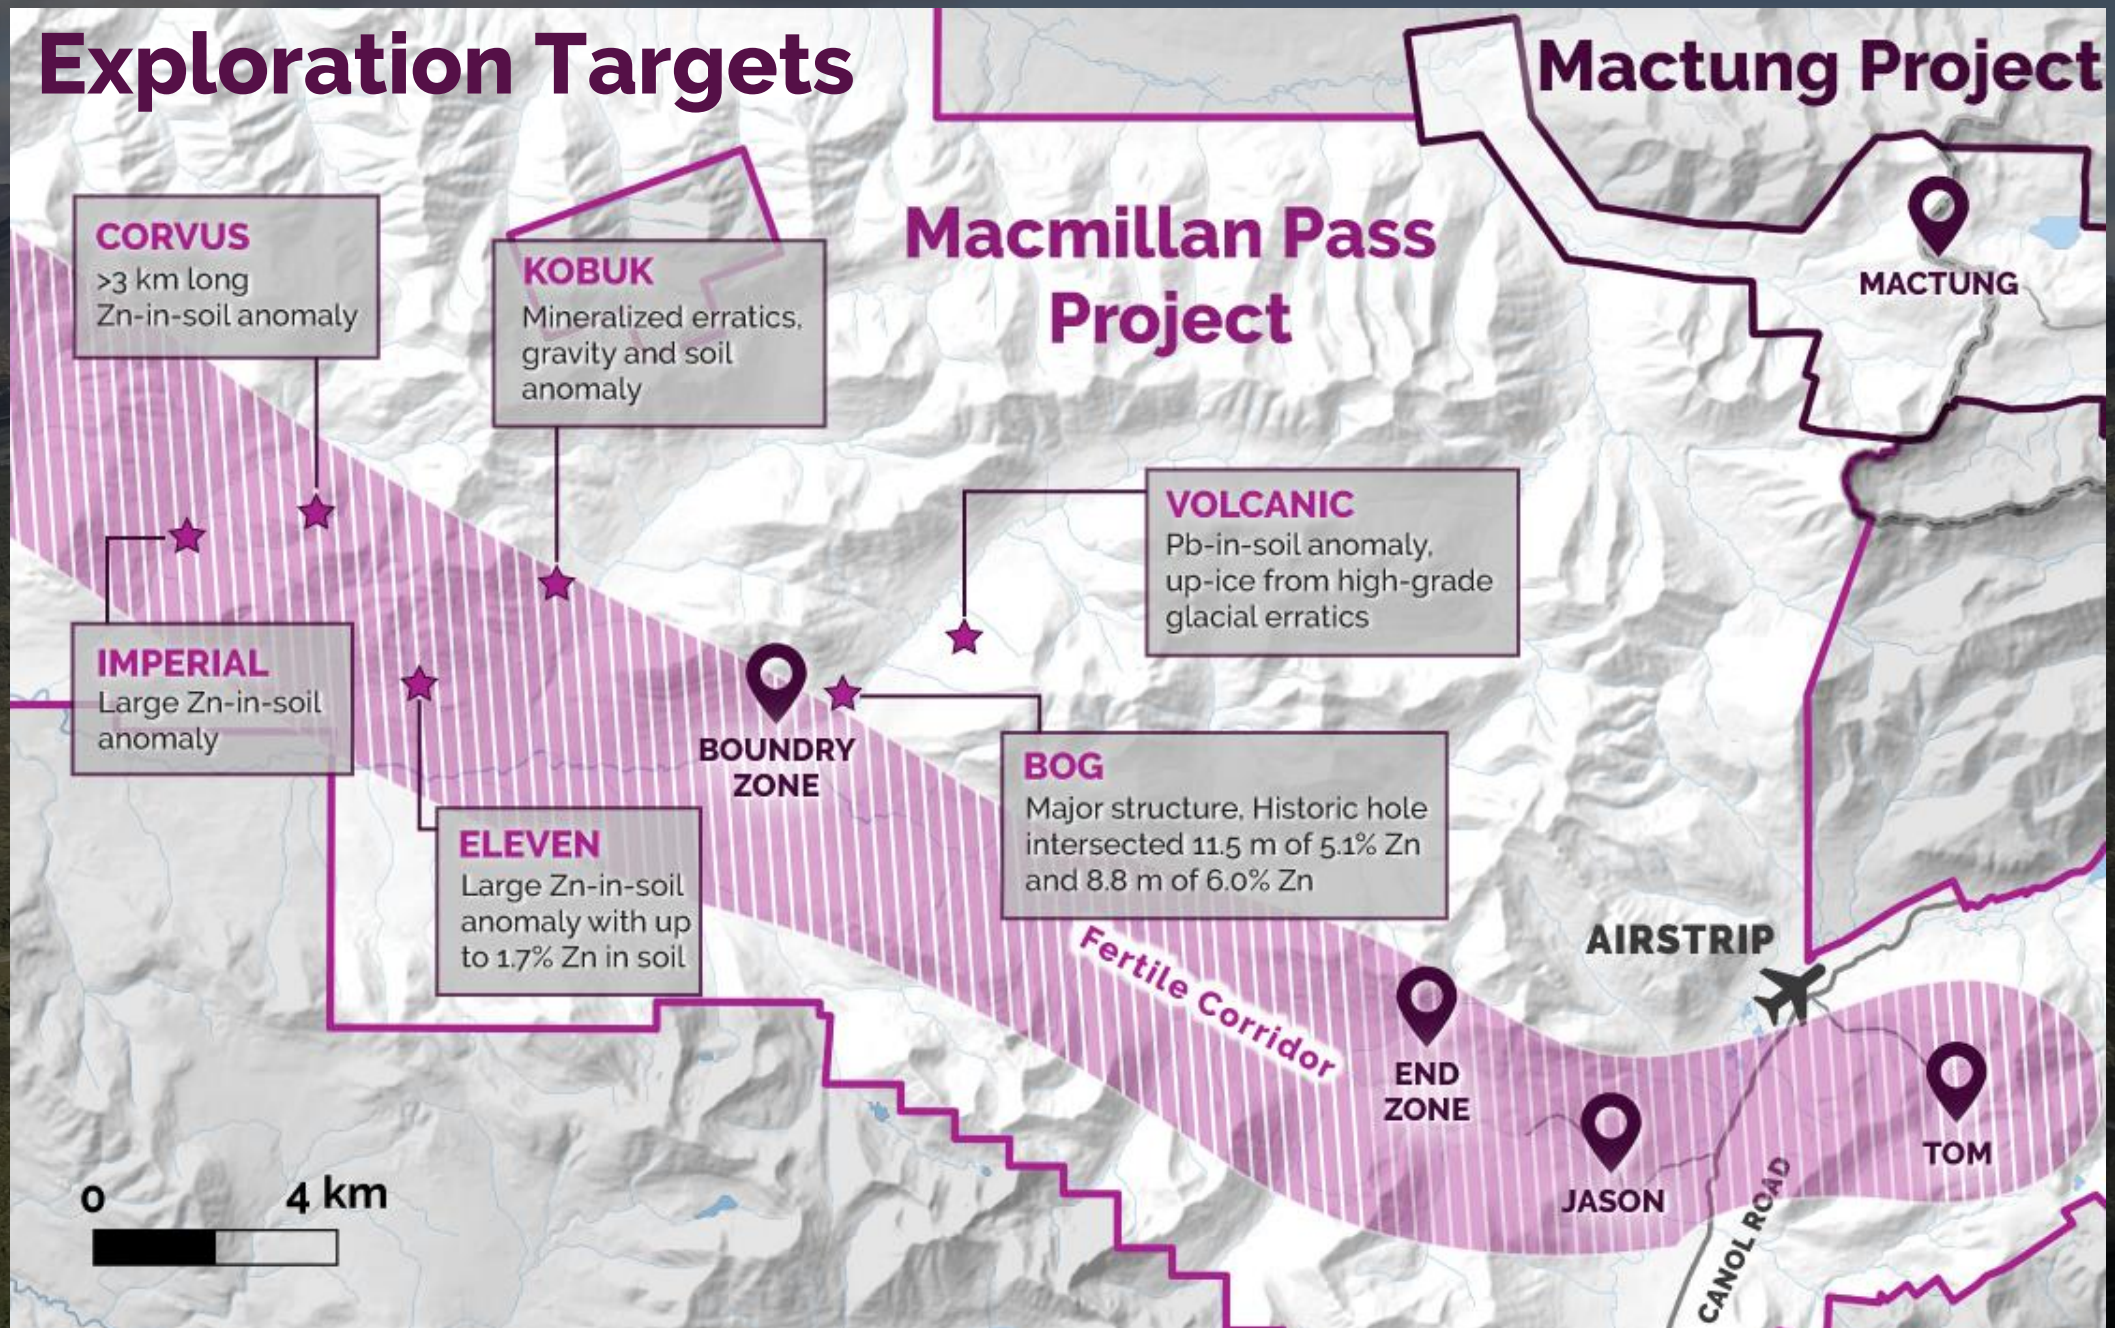

124.5 m of 12.3% Zn, 1.3% Pb, 45.9 g/t Ag
Including 60 m of 19% Zn, 1.6% Pb, 64.7 g/t Ag

Robust potential

- Demonstrated massive scale
- Mineralization occurs as vein stockwork and stratiform layers

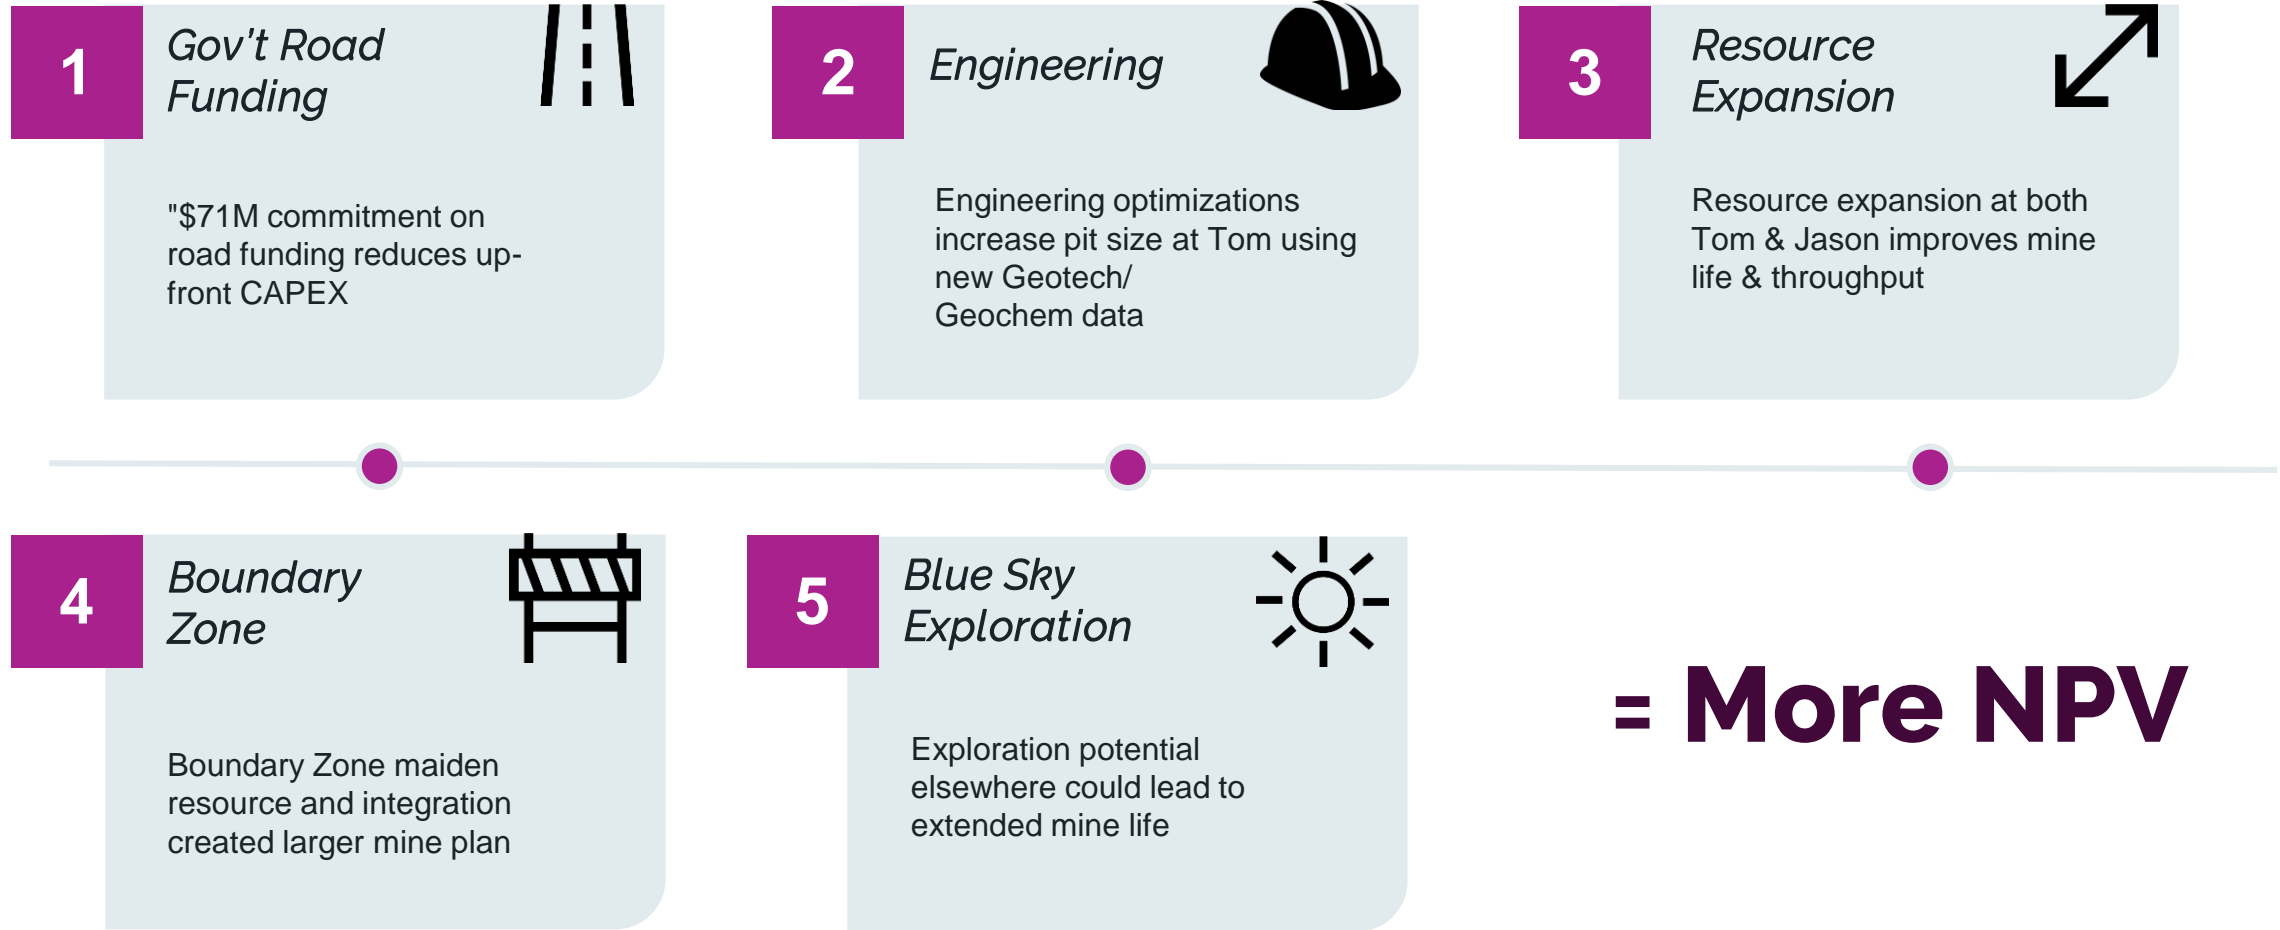

Exploration Targets

Blueprint for Value Creation

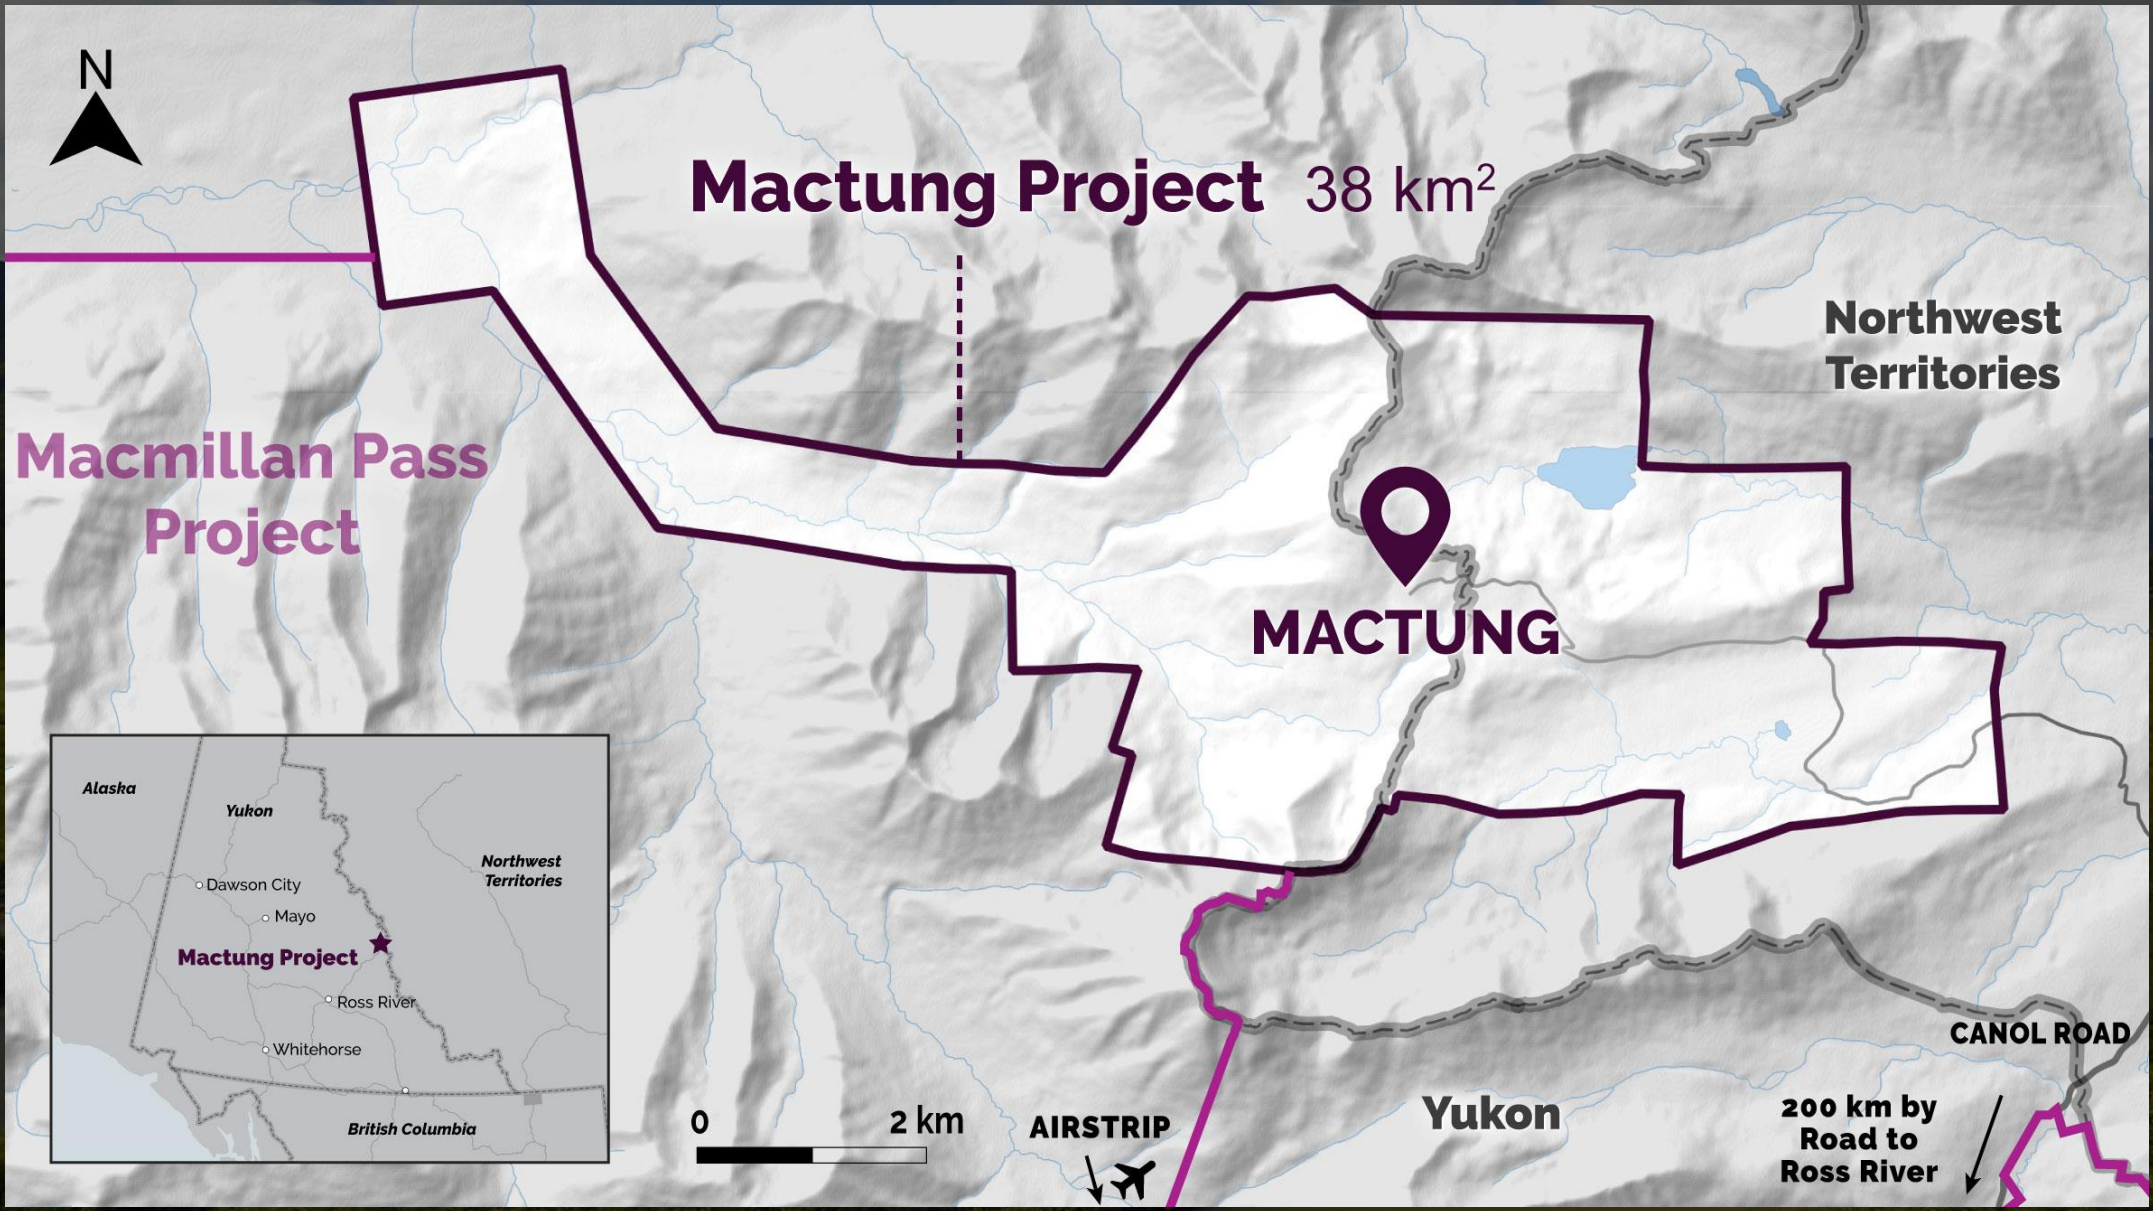

2018 PEA establishes *Base Case*, then add

Mactung Project

Overview

We respectfully acknowledge that the Mactung Project is located on the Traditional Territories of the Kaska Dena Nation and the First Nation of Na-Cho Nyak Dun, and the Sahtu Settlement Area.

Why Tungsten?

CRITICAL METAL

Tungsten is a critical metal as now listed by Canada, the USA, and the EU, with extreme physical characteristics necessary for many industries

CHINA MARKET DOMINATION

China controls both the resource and production side of the Tungsten market, creating risks to the west in an uncertain future

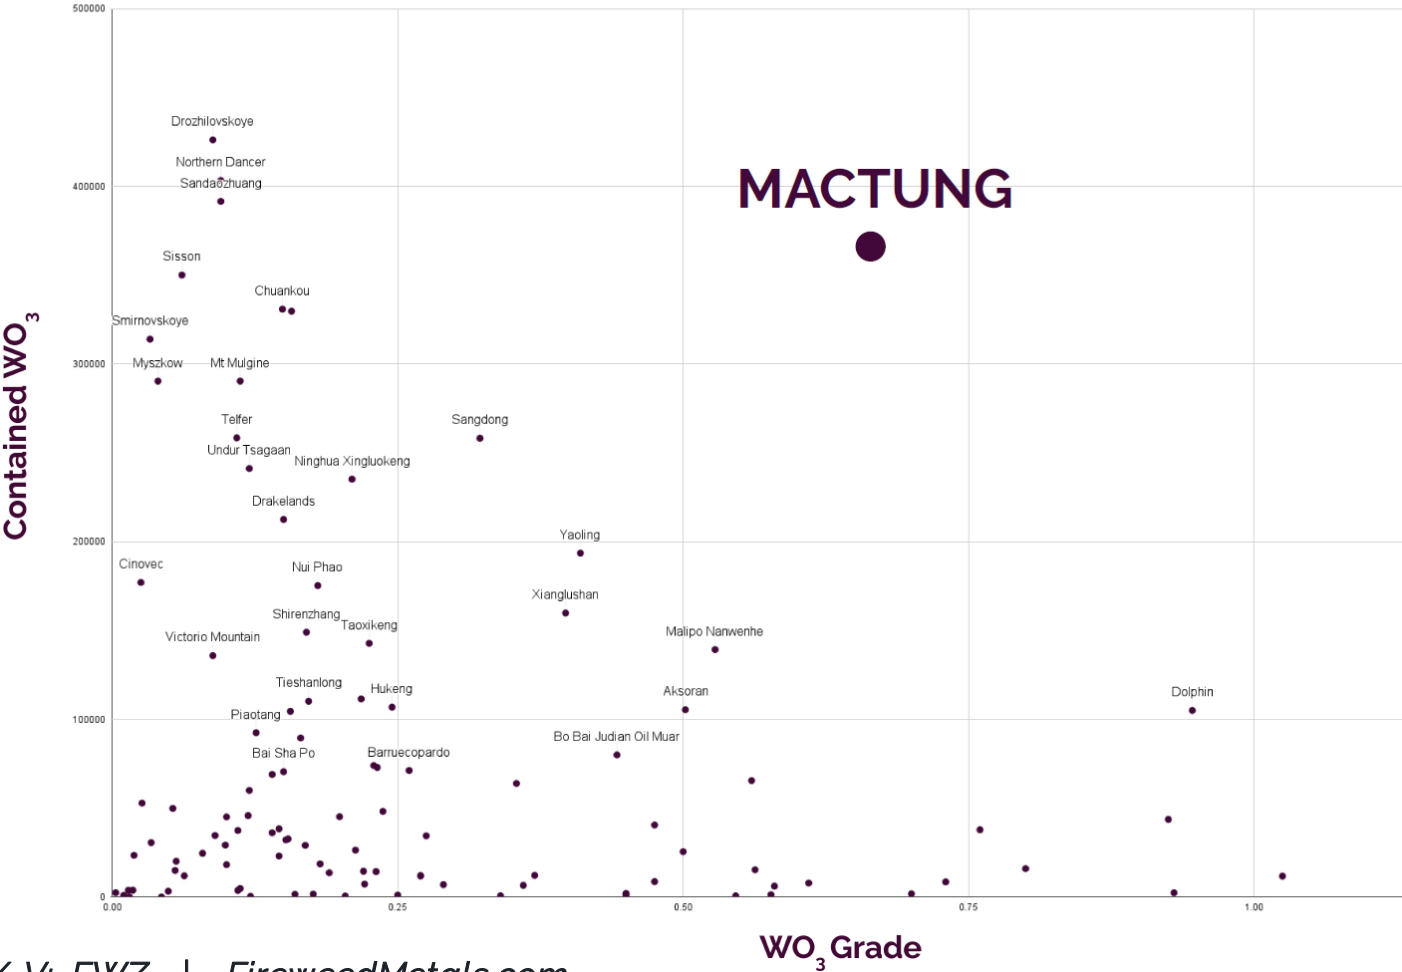

CHANGING WORLD

Recent world events have changed western government views on critical metals, creating an opportunity to create a reliable western source of tungsten

Mactung 2023 Relative Resource Size

Relative Size: Contained WO₃ metal (t)

Mactung is one of the largest, highest-grade undeveloped Tungsten deposits in the world.

Combined, these two projects could be even more than the sum of their parts.

Mactung	Million Tonnes	WO ₃ %
Indicated	41.5	0.73
Inferred	12.2	0.59

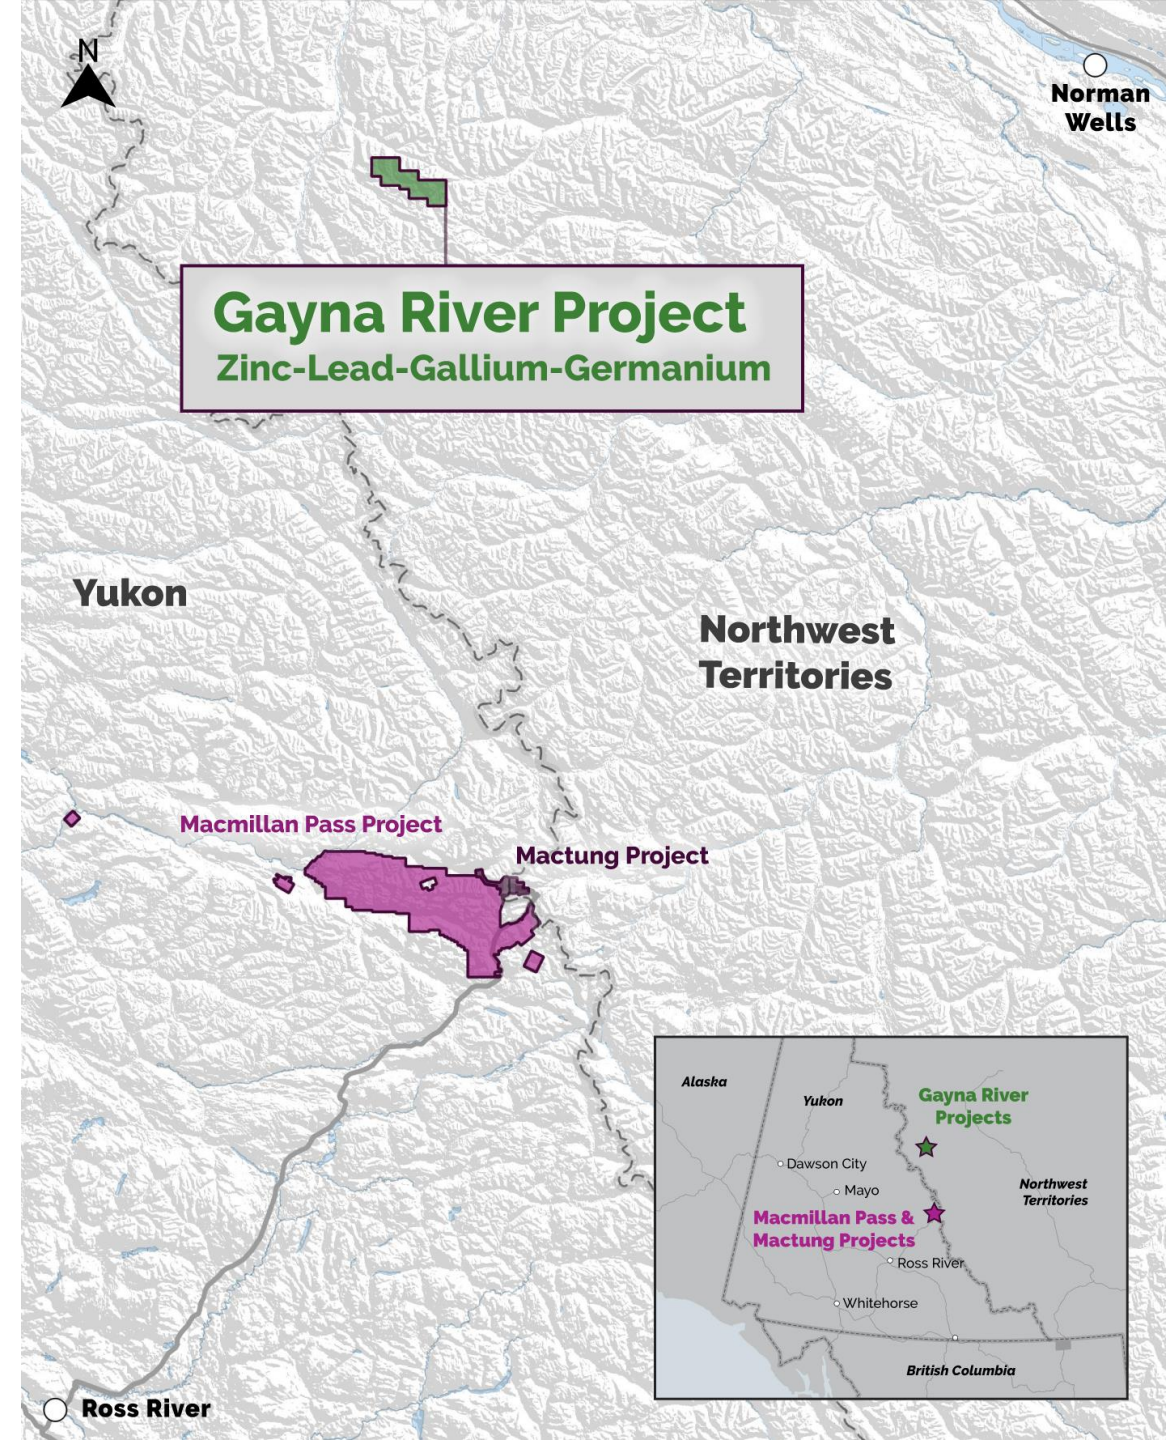

Gayna River

Overview

We respectfully acknowledge that the Gayna River Project is located within Settlement Areas of Sahtu and Gwich'in, and the Traditional Territory of First Nation of Na-Cho Nyak Dun.

Introduction

- *Located in Mackenzie Mountains, NWT, Canada and 180 km West of Norman Wells, NWT, 180 km north of the Macmillan Pass project, Yukon*
- *Highly underexplored area*
- *Platform equivalent rocks to the prolific Selwyn Basin (Tom and Jason)*
- *Well-renowned but forgotten zinc district*
- *Includes critical metals Zn-Ga-Ge (+Pb-Ag)*
- *Fireweed acquired the project by staking*
- *Many parallels with exploration at Macmillan Pass Project*

History

- 1970s** ○ Rio Tinto drilled >28,000 m
- Exploration Target¹ of 30-50 Mt 4.0-4.5% Zn 0.0-0.5% Pb
- 1980s** ○ Rio let claims lapse, believing low potential for high-grade
- 1999** ○ Re-staked by Eagle Plains
- 2007** ○ Strategic Alliance with Teck
- 2018** ○ Claims lapsed
- 2018** ○ Academic research likens Gayna River to Kipushi Mine
- 2022** ○ Staked by Fireweed at low-cost.

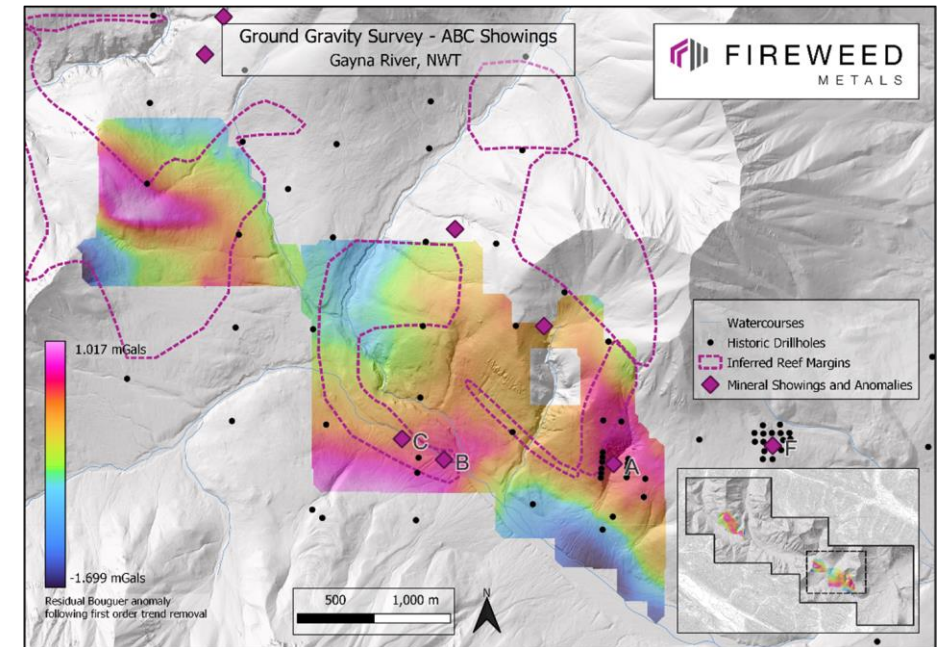

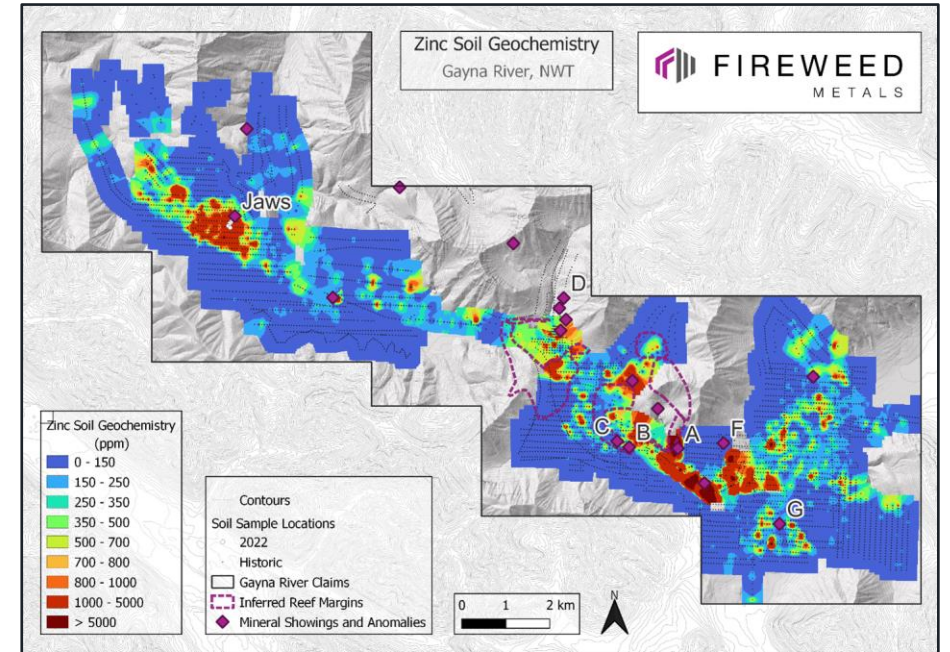

¹ The Exploration Target is conceptual in nature and refers to a 1977 estimate made by Rio Tinto within "Gayna River Project Report – 1977, for Rio Tinto Canadian Exploration Ltd." by R.S. Hewton (1978) of potential for an Exploration Target of approximately 51 million tonnes of 5% combined zinc and lead, see Fireweed News Release dated 10th May 2022 for more details. There has been insufficient exploration to define a Mineral Resource and it is uncertain if further exploration will result in the target being delineated as a Mineral Resource, and Fireweed is not treating the estimate as current Mineral Resources.

FIGURE 36: Diamond drill setup on hole RT 75-14, east side of Discovery Creek. Platform for 75-13 in background.

2022 Exploration Update

- High-grade rock samples confirmed the presence of massive sulphide mineralization that also contains elevated gallium and germanium (all 8 grab samples graded better than 7% zinc, including one at 51% zinc; one of these samples also graded 74% lead).
- Soil samples confirmed the presence of a strong, 4 km x 1 km, historical zinc and lead soil anomaly (all 10 samples returned over 4,000 ppm lead including one sample containing 27.5% lead and 176 g/t silver).
- Results from a 52.7 line-km ground gravity survey have highlighted multiple potential drill targets.
- Completion of a LiDAR topographic survey over the entire 128.75 km² property has generated accurate location data for future drilling and other exploration work.
